Orbach Science Library, Room 213

December 22, 2015 - 12:00 p.m.

(Alison Grimes, Board Chair-Dispensing Audiologist; Patti Solomon-Rice, Vice Chair-Speech-Language Pathologist; Deane Manning-Hearing Aid Dispenser; Dee Parker-Speech-Language Pathologist; Marcia Raggio-Dispensing Audiologist; Amnon Shalev-Hearing Aid Dispenser; Debbie Snow-Public Member)

- I. Call to Order/ Role Call / Establishment of a Quorum
- II. Public Comment for Items not on the Agenda
- III. Discussion and Possible Support for Additional Audiology Doctoral Programs through the California State University System
- IV. Future Agenda Items
- V. Adjournment

Agendas and materials can be found on the Board's website at www.speechandhearing.ca.gov.

Action may be taken on any item on the Agenda. The time and order of agenda items are subject to change at the discretion of the Board Chair and may be taken out of order. In accordance with the

Bagley-Keene Open Meeting Act, all meetings of the Board are open to the public. If you wish to participate or to have a guaranteed opportunity to observe, please plan to attend at a physical location.

The meeting facility is accessible to persons with a disability. Any person who needs a disability-related accommodation or modification in order to participate in the meeting may make a request by contacting the Board office at (916) 263-2666 or making a written request to Breanne Humphreys, Board Operations Manager, 2005 Evergreen Street, Suite 2100, Sacramento, California 95815. Providing your request at least five (5) business days before the meeting will help ensure availability of the requested accommodation.

Dear Board of Directors:

FRESNO

Thank you for your letter describing the shortage of audiologists and audiology education programs in California. Past California State University (CSU) efforts to develop joint doctor of audiology (Au.D.) degrees with University of California (UC) included planned partnerships between CSU Northridge and UC Los Angeles, CSU Sacramento and UC Davis, and San Francisco State University and UC San Francisco, all of which would have followed the successful San Diego State University and UC San Diego joint Au.D. program. Plans for the additional programs did not move forward because we were not able to ensure the level of affordability and access that is central to the CSU mission.

FULLERTON

HUMBOLDT

LONG BEACH

LOS ANGELES

Still operating today, the joint San Diego program has graduated 61 audiologists since the 2007-08 academic year, the period during which the last remaining CSU audiology master's program closed its doors because the doctorate had become the entry-degree for practice. Thirty-seven students were enrolled in the three-year joint San Diego program in fall 2014, and 13 students graduated from the program during 2013-14 academic year. In 2012-13, California graduated six audiologists, only one percent of the 577 audiology degrees nationallyⁱ. As shown in the table below, the degree production in California's only public Au.D. program falls desperately below the projected need for audiologists in our state. From 2010 to 2020, for example, the number of audiology jobs is expected to grow 30 percent, with an average of 50 jobs open annuallyⁱⁱ.

CSU Academic Affairs has retained a focus on audiology education, reaching out the University of California Office of the President and continuing to discuss existing CSU resources that could contribute to future Au.D. programs. As we move forward, we will be in contact with the California Academy of Audiology, seeking your advice and support in meeting the state's needs for more audiology practitioners.

Sincerely,

Timothy P. White

CAA

California Academy of Audiology
Hear and Be Heard...

RECEIVED

MAR 27 2015

March 17, 2015

Timothy P. White, PhD
Chancellor
California State University
401 Golden Shore
Long Beach, CA 90802

Dear Chancellor White:

The California Academy of Audiology is writing at this time due to its concern regarding the lack of Audiology education in the state of California. The profession of Audiology involves diagnostic and rehabilitative care for individuals with hearing and balance disorders of all ages. To provide some history with regard to this problem, the American Academy of Audiology first proposed that a professional clinical doctoral degree (AuD) become the entry-level degree for this profession in 1991. The first AuD program opened at Baylor University in January of 1994. As you may know, Audiology education, historically, has been implemented on a number of California State University (CSU) campuses, with the first accredited program opening at San Francisco State University in 1948. At its height, the CSU system had seven Master of Science degree programs in Audiology. The last CSU master's program for Audiology ceased operation in 2007. The first AuD program in California was developed as a joint program between San Diego State University and the University of California, San Diego in 2003. A second, private Audiology doctoral program (University of the Pacific, UOP) is slated to open in 2015 in San Francisco. The Speech-Language Pathology and Audiology and Hearing Aid Dispensers Board mandated the clinical doctorate as the entry-level degree for licensure in 2008.

When the national academy made its decision to change the entry-level requirements to a clinical doctorate, the CSU programs closed their doors in anticipation of converting programs to meet the new requirements. However, as you know, the State of California's Master Plan for Higher Education only allows doctoral degrees to be awarded by the University of California (UC) system. Many attempts, over many years, were made to partner previous CSU Audiology master's programs with local UC campuses, but with little success. Further attempts to partner with private universities also were unsuccessful. In 2003, one program between CSU and UC was developed in San Diego with no further program development occurring throughout the state since its inception. Due to the clearly recognized need for these training programs, San Francisco State University and the University of California, San Francisco, as well as UCLA and CSU Northridge, were invited to submit a proposal for a joint Audiology doctoral program. These proposed joint programs won permission by both institutions to begin development in 2007. While negotiations between these two university systems were complex, and sometimes contentious, the programs were moving forward until the state's economic difficulties at the time resulted in a withdrawal of any funding for the programs. The situation has continued since that time with no further discussions being undertaken by either university system.

As you are likely aware, the population of California is nearly 39 million. The percentage of Californians aged 65 years and older is approximately 12.5% or nearly 5,000,000. According to the American Speech-Language-Hearing Association, the incidence of hearing loss in the US has doubled in the last 30 years (ASHA, 2015). Currently, 30 million Americans aged 12 and older have permanent, bilateral hearing loss. About 2 percent of adults aged 45 to 54 years have disabling hearing loss. The rate increases to 8.5 % for adults aged 55 to 64 years. Nearly 25 % of those aged 65 to 74 years and 50 % of those who are 75 years and older have disabling hearing loss (NIH, 2014). Since California represents approximately 12% of the US population, it would appear that nearly 4 million Californians have permanent, bilateral hearing loss.

Due to compelling evidence that children born with hearing loss demonstrate a significant delay in speech and language development, California passed legislation (2000, 2006) mandating that all infants born in California hospitals be required to undergo a newborn hearing screening. Centers for Disease Control (CDC) published national data demonstrating that 1.4 babies per 1000 live births will have a hearing loss. With over 500,000 live births in California each year, the California Department of Health Care Services has noted that more than 1200 infants (2.4 babies per 1000 live births) are identified annually as having permanent hearing loss. In addition, the CDC also has found a 31% increase in hearing loss among those between 12 and 19 years of age. Researchers note that this means nearly 20% of US adolescents now suffer some sort of hearing impairment.

The National Institute on Deafness and Other Communicative Disorders (2011) notes "the older population will burgeon between the years 2010 and 2030 when the 'baby boom' generation reaches age 65." In 2009, people over 65 represented 12.9% of the population; by 2030, they will represent 19.3%. The population of individuals over 65 is expected to double between 2008 and 2030 to a projected 72.1 million (Administration on Aging, 2011). The National Institute on Aging has estimated that by 2020, the need for audiologists to serve the older population will increase by 50%. With these startling statistics in mind, it should be appreciated that the 1500 Audiologists presently licensed and practicing in California are woefully unable to adequately serve its hearing impaired, both adults and children. Thus by 2030, California would need approximately 750 more Audiologists to meet the needs of California's hearing impaired.

The SDSU/UCSD program graduates approximately 8-10 Audiologists per year. The UOP program is planning to graduate 20 Audiologists per year, although that eventuality has not been proven since this program has not yet opened. However, even if both programs graduate as many students as planned, this number of new Audiologists will certainly not be sufficient to meet the needs of California's hearing impaired. In fact, at this point, each licensed Audiologist in California provides services for approximately 3300 hearing impaired people. That number would increase to more than 4900 patients by 2030 if the number of Audiologists remains constant. At present, Kaiser Permanente is the largest employer of Audiologists in California. Reportedly (SLPAHADB, 2013), Kaiser now "imports" 80% of its Audiologists from states other than California to meet its needs. In addition, the Veteran's Administration (VA) noted in 2012 that visits to VA Audiology clinics has increased to over 1.6 million or 36% since 2009. Due to the shortage of Audiologists, veterans are waiting up to a year to be seen for diagnostic evaluations and hearing aid fittings. At present, there are a large number of open Audiologist positions in California in all types of professional settings.

The magnitude of the problem of not educating and training enough professional Audiologists in California will continue to cause critical deficits in the hearing health care of Californians, both adults and children. As the statistics bear out, the need for Audiologists will continually increase in the years to come. The California Academy of Audiology asks that you consider this need and take steps to assist in the development of Audiology training programs on CSU campuses either by single programs or by consortia. As you know, clinical doctoral programs already exist within the CSU system (nurse practitioners, physical therapists), whose models could be amended or duplicated as appropriate. In addition, various models can be developed that use existing general fund faculty, colleges of extended learning, and hybrid programs of on-campus and online coursework that will reduce their potential costs

considerably. At present, the tuition and professional fees for the joint San Diego program are approximately \$84,000 for the four-year program (some financial aid available). The UOP program tuition is approximately \$105,000 for its three-year program (no financial aid available). It seems clear that the high costs of these existing, or soon to exist, programs could undermine the ability of this profession to train and educate students from diverse backgrounds who would be essential in providing these vital services to California's highly diverse populations. CSU has always provided affordable education. This is the time to allow that policy to continue for the education of highly trained Audiology professionals.

We look forward to hearing from you on this most important matter, and would be happy to provide and discuss any further information.

Sincerely,

Board of Directors
California Academy of Audiology

California Academy of Audiology
Hear and Be Heard...

August 7, 2015

Timothy P. White, PhD
Chancellor
California State University
401 Golden Shore
Long Beach, CA 90802

Dear Chancellor White:

The California Academy of Audiology would like to thank you for your response to our letter of March 17, 2015 noting our concern regarding the lack of audiology education in the state of California. As you will recall, in that letter, we described the history of audiology training in California, as well as the current, severe shortage of audiologists in California in the face of its significant hearing health care needs. In particular, we noted the growing number of Californians over the age of 65, and the increasing incidence of hearing loss in that and all populations. We also noted that California has mandated newborn hearing screening with an outcome revealing a higher incidence of permanent hearing loss in these infants than at the national level. As previously noted, these factors make it clear that the approximately 1500 audiologists presently licensed and practicing in California are unable to adequately serve its adults and children with hearing loss. In fact, by 2030, California would need approximately 750 more audiologists to meet the needs of Californians with hearing loss.

We also noted that the SDSU/UCSD audiology clinical doctoral (AuD) program graduates approximately eight to ten audiologists per year, and the new UOP program will be graduating approximately sixteen students per year (based on 2015 matriculation). We have since learned that the proposed University of California, Irvine (UCI) AuD program will be graduating six to seven audiologists per year. Therefore, the current estimate of the number of graduating audiologists (~32/year) falls significantly short of the 50-60 new audiologists required each year to fulfill the hearing health needs of Californians over at least the next two decades.

As you know, California's population is highly culturally and linguistically diverse with some minority cultures quickly taking on majority status. By 2020, ethnic minorities will constitute approximately 35% of the American population, and may be the majority by 2050 (*JAMA Intern. Med.*, 2014). In California, Latinos have already become the majority of the state's population (39%). In addition, California's demographers have projected that by now, the state's residents also include 38.8% white non-Hispanic, 13% Asian American or Pacific Islander, 5.8% black non-Hispanic, and ~1% Native American (Pew Research Center, January 2014).

Cultural competence in health care is a growing underpinning of successful professional training. That is, with the rapidly growing minority populations, soon to become the majority population nationwide, it is increasingly necessary for training programs to encourage growth in

the number of minority health care professionals. Unfortunately, this is not occurring (Sanchez, et al., 2015, Gonzalez, et al., 2014, Genao, et al., 2003). Thus, there is a growing cultural gap between patients and health care professionals. National Standards For Culturally and Linguistically Appropriate Services in Health Care, published in 2001, indicated the necessary changes required for culturally and linguistically appropriate services particularly for the needs of racial, ethnic, and linguistic population groups that may experience unequal access to health services (Tucker, et al., 2013). Ultimately, the aim of the standards was to contribute to the elimination of racial and ethnic health disparities and to improve the health of all Americans (National Standards for Culturally and Linguistically Appropriate Services in Health Care, U.S. Department of Health and Human Services, Office of Minority Health, March 2001). Diverse medical personnel draw diverse medical populations, thus reducing health inequities and disparities that can occur due to the potential mistrust and misunderstandings between culturally diverse patients and their healthcare providers.

The current cost of audiology education in California impedes the growth of a more diverse population of audiology practitioners. At present, the tuition and professional fees for the joint San Diego program are approximately \$84,000 for the four-year program (some financial aid available). The UOP AuD program tuition is approximately \$110,000 for its three-year program (minimal financial aid available). The proposed UCI AuD program will likely have tuition, professional fees, and financial aid similar to that of San Diego. Another example of the cost of joint UC/CSU programs is the current tuition for the UCSF/SFSU Physical Therapy doctorate, which is approximately \$87,000 for a three-year curriculum. These high costs are inherently likely to undermine the ability of this profession to train and educate students from diverse backgrounds who would be essential in providing these vital services to California's highly diverse, hearing impaired population. On the other hand, judging by the tuition for the San Francisco State University stand-alone doctoral program in Education Leadership, the costs of CSU-based programs would be in the range of \$55,000 for a three-year program. The vast difference in the cost of these programs demonstrates that the CSU system would be able to provide training for these professionals at nearly half the cost of the other programs. In addition, this would be occurring in an institution with teaching acumen, experience, access to multiple medical facilities, and history in providing the most comprehensive education and training for the profession of audiology. Making this educational opportunity available within the CSU system, at a reasonable cost, would open the door to educating and training far more diverse professionals who better reflect the state's diverse population.

Since the CSU system has always provided comprehensive and affordable education, it is our hope that you will consider the pursuit of a CSU stand-alone clinical doctoral program in audiology. We believe that by making audiology training affordable, we will be able to draw the much-needed numbers of audiology trainees, particularly those who would bring essential diversity to the profession.

We look forward to hearing from you, and would be happy to provide and discuss any further information.

Sincerely,

Board of Directors
California Academy of Audiology

Senator Carol Liu, Chair, Senate Education Committee
Assembly Member Jose Medina, Chair, Assembly Committee on Higher Education

PUBLIC COMMENT – SLPAHADB MEETING - NOVEMBER 6, 2015

Requesting Board support for a bill for California State University (CSU) stand-alone AuD programs

Presented by Becky Bingea, President, California Academy of Audiology (CAA)

Summary: The CAA will be meeting with Assembly Member Kevin Mullin (D-San Mateo) on December 1st regarding the possibility of sponsoring a bill for a CSU stand-alone AuD program or programs. CAA would like the support of the SLPAHADB. Since there will not be another Board meeting until February, we are hoping to secure Board support prior to this meeting, and, if supported, a more formal endorsement (letter) by early January.

Background (see attached letter & response): CAA sent a letter to the CSU Chancellor Timothy White on March 17, 2015, which provided a request for the development of audiology training programs on CSU campuses, either by single programs or consortia.

- Background information was provided with acknowledgement that the California Master Plan for Higher Education only allows doctoral degrees to be awarded by the University of CA (UC) system.
- The history of attempts to establish additional state programs, including joint UC/CSU programs, was reviewed.
- Evidence was provided regarding the shortage of audiologists in CA to meet the increasing need in view of the aging population, particularly as relates to the Baby Boomer population, as well as the Newborn Hearing Screening population audiologists are mandated to serve.
- Stats were provided regarding the current number of audiologists in the state and the inadequate ability to meet CA needs with current numbers of audiologists and program graduates.
- Stats were provided regarding the current high costs of the two existing CA AuD programs, which would limit the number of graduates and their cultural diversity.
- The CSU Chancellor responded on April 10, 2015, acknowledging failure of past attempts to create new state audiology programs except for the existing USD/SDSU AuD program.
- The Chancellor noted that the CSU has retained a focus on audiology education and will continue to be in contact with the UC Office of the President and continue to discuss existing CSU resources, as well as seek the advice and support of the CAA in meeting the state's needs for more audiology practitioners.

Background update (see attached letter): CAA sent a second letter to CSU Chancellor White on August 7, 2015, reviewing the history of audiology training in CA and the current severe shortage of audiologists in CA.

- Also emphasized was the cultural diversity in CA and the growing cultural gap between patients and health care professionals, along with the need for training programs to encourage growth in the number of minority health care professionals.
- The cost of audiology education in CA impedes the growth of a more diverse population of audiology practitioners, given the tuition and fees for the 2 AuD programs in the state, as well as the proposed UC Irvine program.

- The CSU system has traditionally provided comprehensive and affordable education, and a stand-alone clinical doctoral program in audiology would make audiology training more affordable, would enable essential diversity to the profession, and would draw the needed numbers to help meet CA's shortage.

Additional justification:

- Initial precedent was set by the 2005 Jack Scott bill (SB 724), signed by the Governor, which was the first to allow an independent doctoral degree (EdD) by the CSU. Since then, the CSUs have offered the following two clinical doctorates since 2012: Doctor of Nursing Practice (DNP) and Doctor of Physical Therapy (DPT)
- Cost of current CSU doctoral programs* are significantly less (estimated 1/3-1/2 less) than current AuD programs in CA*: **EdD** ~\$55,000/3yrs, **DPT** ~\$77,000/3 yrs, **DNP** \$38,000/5 semesters) **vs.** ~\$110,000 (including fees) for the private University of the Pacific, San Francisco AuD/3 yrs (9 semesters) & \$86,250/4 yrs for the SDSU/UCSD AuD program.
- Projected CSU AuD programs vs. previous Master's programs:
 - Number of units would triple
 - Practicum hours would increase from 375 to ~1800.

*per current website information

If supported by the SLPAHADB, CAA is hoping that the Board will cc their letter to the following legislators:

The Honorable Carol Liu, Chair
Senate Education Committee
State Capitol, Room 2083
Sacramento, CA 95814

The Honorable Jose Medina, Chair
Assembly Committee on Higher Education
State Capitol, Room 5135
